The production of the plant was increased by the installation of the included this machinery of the ballocal Mimosa Firm. Loures hauled this machinery from a railroad station about 16 miles east of PIRESLAVE. According to Joviet, the plant had a scrap ratio of 30 to 40 percent. The scrap was burned in the boiler house.

- 11. Jidth of the film strip: 15,26,30, and 70 centimeters.
- 12. Decided boxes of the DATATA Mimosa fire, boxes with inclish inscription were also seen.
- 13. The produced films were shipped in boxes 150 x 120 x 100 cm.
- 14. Designation: Plant No 5 (heard from poviets).

25X1

Comment:

- a. The information on the measurements of the film strips (para 11 and 13) allows certain conclusions as to the photographic equipment by the loviet hir force.
- b. The data is considered credible, althout the mentioned scrap ratio of 30 to 40 percent seems exaggerated. Unfortunately, the report does not live any information concerning the employment of deported Jerman experts. Also it is not stated where the films were shipped from the directed.
- c. Information on this plant was transmitted in a previous report, according to which the plant was located on the courtern edge of the town. It was stated that the dismantled machinery had come from a DADDER "linerva" Firm, which certainly was incorrect. It seems more credible that this machinery had been dismantled in the DARGDER "Mimosa" Firm as currently stated. This firm, located on Johandauer and Daeron-steiner strasse in DRESDER, was a well-known plant for the production of the photographic papers and films. During the var the firm was a subsidiery plant for the production of optical and measuring equipment used by submarines and for V-weapons.
